

ABSTRACT

A combination lipstick and breath freshener barrel dispenser accommodates both lipstick and breath fresheners therein. A single tubular lipstick dispenser includes a hollow cap housing 5 closing the lipstick barrel, wherein the cap separately dispenses breath freshener therefrom, such as mint tablets or dissolvable wafer film strips. The dispenser may include a miniature version of pump spray or aerosol propelled breath spray with integral dispensing cap, or a flexible liquid dispenser which attaches to 10 the end of a standard lipstick cover. Alternatively, the cap may be a further cap upon the lipstick barrel cap, and may alternatively dispense a cosmetic cake block, such as lip gloss or lip balm therefrom.
